

FOLDING SAW TABLE

ABSTRACT OF THE DISCLOSURE

5 A collapsible table assembly having improved portability. A mechanism
interconnects the table and supporting legs for moving the legs between a diverging
supporting position, a folding position, and a storage position. A saw track assembly
includes an upper platform for receiving a cutting device and a lower platform for
supporting a workpiece during cutting connected to the upper platform. Each of the
10 upper and lower platform are disposed above the table. A guide pin pivotally attaches
the saw track to the table for allowing the saw track to pivot through a plane parallel to
the table. A plurality of material supports supported by the table rotate between a first
material supporting position for supporting a workpiece and a second unobstructing
position for allowing the saw track to freely pivot through the plane without contacting
15 the material supports.
